night.

Philea Resort & Spa Submitted by: Symbios Design Associates Sdn Bhd

Located less than 1km away from the Ayer Keroh interchange of the North-South Expressway, Philea Resort & Spa, Malacca, is the first and largest log cabin resort in the country. The 11 acre area consists of 66 units of log houses with 180 rooms, 19 suites and two villas.

The site is nestled in a charming valley, complete with a multitiered terrain, surrounded by a rubber estate. As a result, the project was designed to flow seamlessly alongside the undulating contours of the land. Water elements abound in the centre of the site because of an existing creek. As well as being a natural feature, the stream's other purpose is to harness the groundwater and manage the overflow discharge during times of heavy water flow.

The roadway circuit around the project is designed for the use of a buggy. Every log cabin and activity area is accessible by buggy from the hotel lobby. The pedestrian path is integrated into the buggy path to minimise impact on the local environment.

The selection of finishes and materials played an important role in creating the design intention, which is a more rural feel. Natural elements which blend with the natural setting of the environment have been placed in the creation of the hardscape elements. In addition, the plant selection is based on a 50-50 ratio of common and rare species in order to instill surprise and inspiration for the visitor.

Published Articles MLAA EXCELLENCE AWARD

Articulation 1 - The flat expanse of raked gravel can be articulated as clouds with boulders placed halfway out of the raked gravel to be portrayed as mountain peaks surrounded by the clouds like in the Chinese paintings. (These boulders are always in odd numbers, as it is believed to be easier to arrange.) The plants are representative of the vegetation around the mountains. Some believed that the Japanese garden was a joke created by a Japanese who was amused by the Chinese paintings.

Articulation 2 - The raked gravel depicts the rippled surface of the ocean which is formed by the idea, inspiration or thought that emerges from the calm ocean articulated through meticulous placement of boulders. Zen gardens are almost always sparsely decorated with plants. Hedges are planted as a background and precisely pruned to shape and the leave size is preferably small to preserve the clean appearance. Some good examples are the Dumin Repin Variegated and the Fixus Sph. For ground covering that interweaves by the boulder island, various Fens, Davaf Juniper and Bamboo Fixus are great choices. As such there are no massive and colourial planting in a Zen garden.

Despite the general sense of simplicity and serenity, the Zen garden requires discipline when it comes to maintenance. All that weeding, pruning and raking should become part of the daily routine, like that of the Zen gardens tended by the monks in the temples.

These are the elements that demand the most attention in a Zen garden: Cleanliness of the garden. Even a tiny little bit of weed will spoil the entire effect of a Zen garden.

iii Raking patterns. The pattern of the raking must look fresh all the time. Which means the gardener should carefully tend to the raking in an almost religious ritual. Even after a rainfall, the gravel should be raked to regain its original design. ii Pruning the hedges. The background hedges must be pruned at a regular basis to form a cubicle shape and to create a blank and vertically flat backdrop. he

a touch of Zen

Clean, pure and simple - the fundamental qualities of Zen gardens generally radiate a certain aura of tranquillity and elegance.

TEXT TONG CHIN THING PHOTOS SYMBIOS DESIGN

Sometimes understated otherwise elaborate, gardens are very much a personal and intimate part of our daily lives. It is an expression of our soul that we portray to the public, whether we love the frolicking fashion of freesias that splashes colours all over or neatly mowed lawns with perfectly manicured hedges. Rejuvenating and usually maintaining the traditional principles of excellence and balance. Zen gardens are often reflections of a contemplative mind. Originating from Japan, 'Zen' comes from the word 'Zazen',

meaning 'monk'. It was contrived mainly in the courtyard of a temple with the sole purpose of recreating a peaceful and calm setting to complement the temple ambience.

Clean, pure and simple - the fundamental qualities of Zen gardens generally radiate a certain aura of tranquillity and elegance.

Prettily Petite

MAN

Crave for that green haven even when you only have a small plot of garden? Find out how you can fully utilise limited spaces.

TEXT: TONO CHIN THING PROTOS C CONTRIBUTING (DEAS) COURTESY OF SYMBIOS DESIGN.

Living in a tropical climate, we often find ourselves engulfed in passionate greens. Green fingers or not, a little part of everyone craves for that tiny patch of garden, be it in a simplistic Zen tranquillity or in a fervent fashion of Balinese haven. Somewhere you can twiddle your fingers in fresh soil and prune that stray branch or lovingly pluck out the weeds around your plants. It's a luxury to be so near to nature and we are frequently stumped when we are stuck with a little less than we imagined when it comes to garden size. So how do you fully exploit your small plot of land into picture perfect?

134 home]concepts

Current popular concepts for the young and hip are Contemporary Tropical, Zen and Minimalist or a hybrid of the three. The older generation opts for Resort Tropical and Balinese concepts.

Looking Ahead - Year 2006

As Malassians get more and more aware of the importance of greens, the younger generation especially looks forward to surrounding their home and family in a green long amidst the jungle of concrete in the city. Those who can afford it are setting their smaller plants replaced by more mature plants. They want their children to grow up in a greener surrounding and even those who stay in apartments and condominiums are implementing indoor gardens to liven up the space. Newer and innovative designs for gardening gadgets are also multrooming all over the market with features to lessen the burden of maintenance works by demand of home owners and garden lovers.

Creative Breakthrough

Brighten your little garden space with your own special deco. Features that are products of your own creative DIY mind or any interesting pieces you pick up when you shop. For example, an old pot can be used as an aquatic plant pot or a water feature. Just explore beyond the ordinary and you will find vourself longing in a garden you can be proud of one fine day.
